

Product Information ITM-4DW

FOOD

Four-beam turbidity measurement ITM-4DW

Application / Specified Usage

- Turbidity measurement in the range of 0...5000 NTU or 0...1250 EBC
- Suitable for process and drinking water applications

Application Examples

- Fresh water monitoring in the beverage industry
- Water/wastewater monitoring, e.g. in dairies
- Coolant circuit monitoring

Hygienic Design / Process Connection

- CIP/SIP cleaning up to 130 °C
- Stainless steel housing, optical block of PPSU, optics of sapphire glass (FDA compliant)
- Process connections: Milk pipe DIN 11851, Tri-Clamp, DIN flange

Features / Advantages

- Soiling of the optics is compensated
- Compact device; separate evaluation unit not required
- Units switchable between NTU and EBC (11 ranges each)
- 4 freely selectable measurement ranges, externally switchable
- Smallest measurement range 0...5 NTU or 0...1 EBC
- Largest measurement range 0...5000 NTU or 0...1250 EBC
- Smallest pipe diameter DN25
- Color-independent measurement (wavelength 860 nm)
- Switching output and analog output

Options / Accessories

- Electrical connection with M12 plug-in connector
- Preassembled cable for M12 plug-in connector

Measuring Principle of the 4-Beam-Turbidity Meter

The ITM-4 measures turbidity using the 4-beam alternating light method. The transmitter contains two infrared senders and two infrared receivers arranged at right angles to each other. To determine the turbidity value, the senders are alternately activated. When sender 1 is active, receiver 1 detects the transmitted light and receiver 2 detects the light scattered at 90°. When sender 2 is active, the situation is reversed.

An exact turbidity value is calculated from the four measured values of a measurement cycle. Since a transmitted light measurement is available as a reference for each 90° scattered light measurement, interference factors such as contamination of the optics or component ageing can automatically be compensated. Disturbing influences from the sporadic occurrence of solids and air bubbles are largely cancelled out due to the evaluation of multiple measurement cycles.

Mechanical Connection / Installation

- The device has to be installed in that way that the fitting is entirely filled with media.
Air or air bubbles are detected as turbidity.

- **Correct installation:**

- Before or into an ascending pipe.

- **Wrong installation:**

- Before or into a descending pipe.
 - Into the highest point of a pipe, air bubbles will concentrate there

- Pay attention to the above-mentioned drawings!
- Do not open the screws at the optical block!

Conventional Usage

- Not suitable for applications in explosive areas.
- Not suitable for applications in security-relevant equipments (SIL).

Advice to EMV

Applicable directives:

- Electromagnetic Compatibility Directive 2004/108/EC
- The CE label confirms compliance of this product with the applicable EC directives.
- You have to guarantee the compliance of all guidelines applicable for the entire equipment.

Advice to Pressure Equipment Directive

ITM-4 turbidity meters are pressure accessories as defined by the Pressure Equipment Directive PED 97/23/EC and must therefore be subjected to a conformity assessment procedure. The devices are approved for „Fluid Group 2 Media“. By definition, Article 3 Paragraph 3 Sound Engineering Practice applies.

Turning the display

1. Loosen the set screws (1) on top and bottom resp. on the left and right.
2. Turn the head to the desired position.
Turnig is possible only in steps of 90°!
3. Tighten the two set screws (1).

Fig.: Turning the display

External measurement range selection

- The turbidity meter is delivered with measurement range 1 (0...1000 NTU / 0-1000 EBC = 4...20 mA)
- Range 2 (E1=24 V DC), range 3 (E2=24 V DC) and range 4 (E1=24 V DC and E2=24 V DC) can be chosen by means of the rated signal +24 V DC (18...36 V DC) at the inputs on pin 7, 8 and 9. Please take note of the connection plan and the table below.
- If these inputs are not connected, measurement range 1 always will be active!

E1*	E2*	Measurement range
0	0	1
1	0	2
0	1	3
1	1	4

*0 = 0 V DC / 1 = 24 V DC

The digital inputs E1 and E2 are DC decoupled to the power supply.

Reference ground: pin 9

Electrical connection ITM-4

Connecting diagramm M12 plug-in ITM-4/.../M12

M12 plug-in left (4-pin)
power supply /
outputs 4...20 mA

- 1: + 24 V power supply
- 2: + output turbidity
- 3: - output turbidity
- 4: - power supply

M12 plug-in right (5-pin)
switching output /
digital inputs

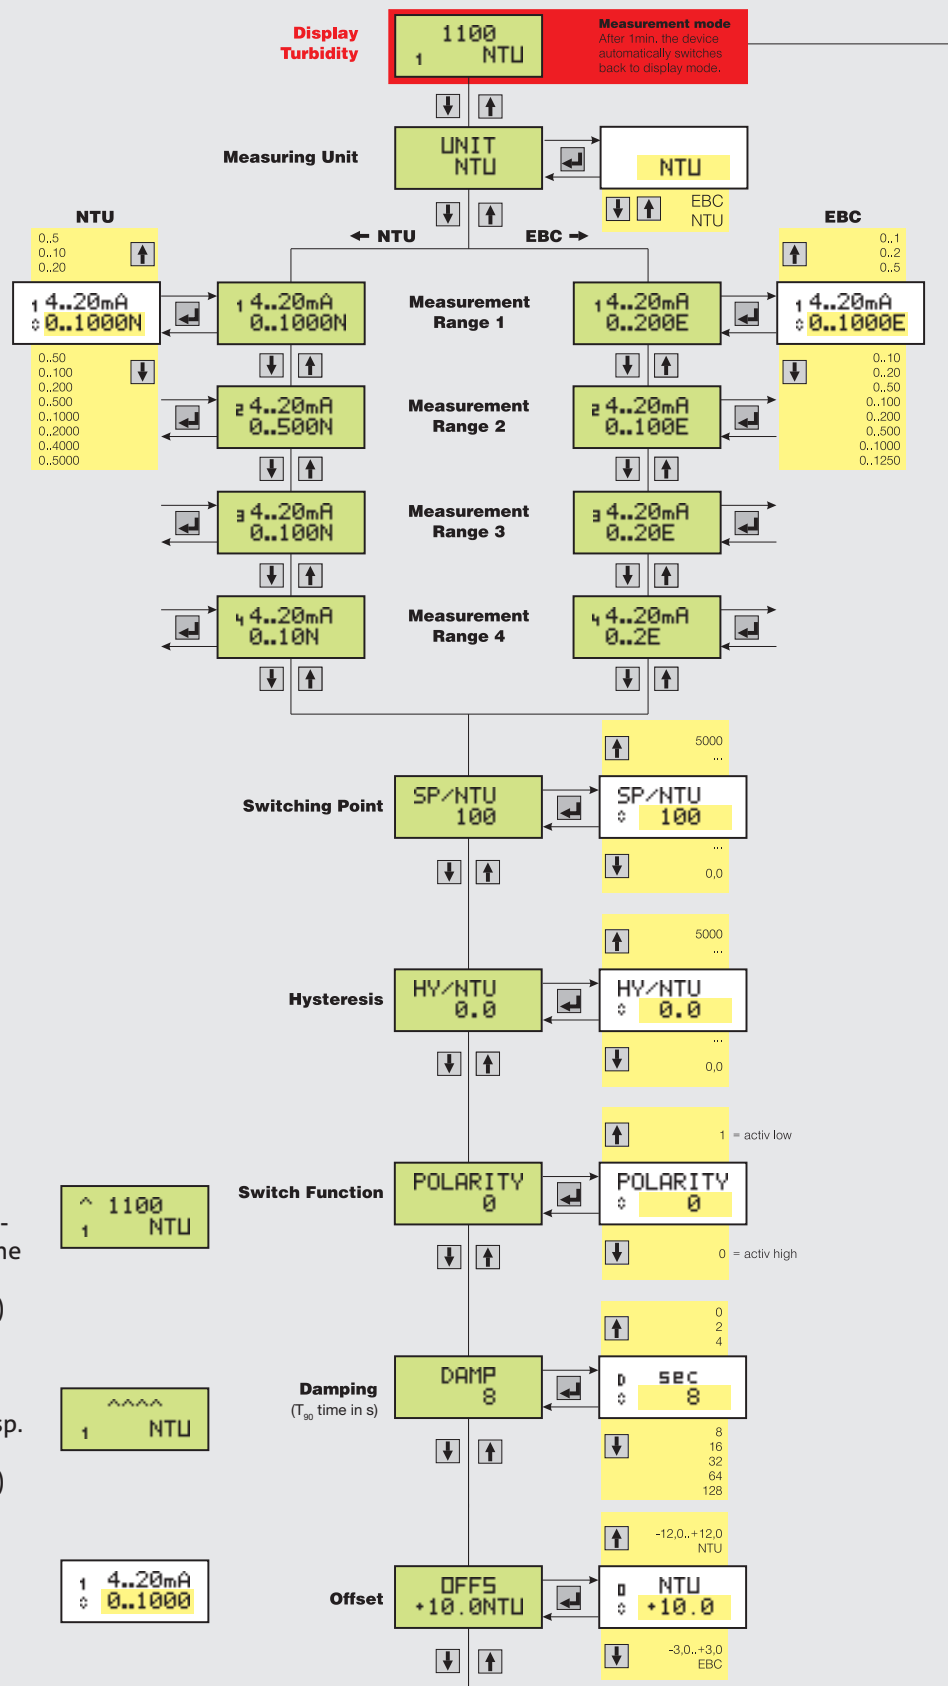

- 1: E1 input
- 2: E2 input
- 3: 0 V input
- 4: not connected
- 5: switching output

Note: Switching output

- If the output current is higher than the specified current (80 mA) an electronic fuse switches off the output.
- To reset the switch output disconnect the output (or deactivate and activate the turbidity meter).

Transport/Storage

- No outdoor storage
- Store in an area that is dry and dust-free
- Do not expose to corrosive media
- Protect against solar radiation
- Avoid mechanical shock and vibration
- Storage temperature 0...40 °C
- Relative humidity max. 80%

Cleaning / Maintenance

- Do not use sharp items or aggressive detergents for cleaning the optics.
- When using a pressure washer, do not point the nozzle directly at the electrical connections.

Reshipment

- Sensors and process connection must be clean and must not be contaminated with hazardous media and/or heat-conductive paste. Note the cleaning information!
- To avoid damage of the equipment, use suitable transport packaging only.

Disposal

- This instrument is not subject to the WEEE directive 2002/96/EC and the respective national laws.
- Give the instrument directly to a specialized recycling company and do not use the municipal collecting points.
