

Fieldbus Coupler: Modular I/O-System

Application / Specified Usage

- In- / output of norm signals and process values by Profibus-DP or Ethernet (Modbus/TCP)
- Cost saving fieldbus connection of sensors and actors with decentralised in- / output units

Features

- Modular system is optimal customizable per requirement
- Easy system extension by pluggable modules (up to 62 modules addressable with one fieldbus coupler)
- Multifunctional microcontroller based modules; integrated signal preprocessing
- Thought-out concept of galvanic isolation
- Modules changeable during operation without downtime ("hot swap")

Modules

- Fieldbus coupler for Profibus-DP or Ethernet (Modbus/TCP)
- Digital in- / output modules
- Analog in- / output modules
- Analog input modules for Pt100 / Pt1000 and thermocouples
- Relay modules (switching current 5 A max.)
- Power modules for up to 16 I/O-modules

Functional Description

The "Modular I/O-System" NRL includes one fieldbus coupler and up to 62 in- / output modules mounted on DIN rail. All modules are linked by pluggable bus connectors which are integrated in the rail. More than 16 modules require additional power modules.

System power (24 VDC) is directly connected to the fieldbus coupler. All other in- / output modules are supplied through the bus connectors.

The I/O-modules are linked to the fieldbus coupler by the internal data bus. In- / output values and status of the modules are frequently actualized and saved by the fieldbus coupler. Cycle time depends on type and number of connected modules and current bus load.

Configuration of the modules can either be done by configuration software BlueControl® or directly over the fieldbus.
