

Processor Digital Counter

pez

General Function

The processor digital counter **pez** can be set by means of the splash-proofed film-sealed key pad to one of the input types pulse counter, frequency counter, revolution counter, timer or distance meter with rotation encoder. The display range can be freely assigned to the number of pulses. Further hardware can be operated from the **pez** by means of the freely adjustable analog output (optional).

By means of the two counting inputs (E1, E2) both the difference (E1-E2) and sum counting (E1+E2) can be realized with the **pez**. A count value can be set. Besides there is a "Hold"-input to freeze the display. Rotation encoders and initiators can be connected to the **pez** (without external power supply) directly.

Processor digital counter *pez*

Features

- two relay switching outputs
- counting of frequency, revolutions, distance or time
- all settings saved on loss of power
- unit plate replaceable
- MAX/MIN hold
- 0/4...20mA analog output
- plug-in terminal block connections

Order Code

You must state the following when ordering:

| Type | Options | Supply voltage |
|--------|---------------|----------------|
| pez | | 230V AC |
| pez-sa | | 24V AC |
| pez | analog output | 115V AC |
| pez | input npn | 230V AC |
| | input Namur | |

Specification

| | | |
|-------------------|---------------------|--|
| Housing | panel mount case | 96x48x130mm, 2 side mounting clips |
| Panel cutout | (WxH) | 92x45mm tol. -0,5mm |
| Enclosure code | front/rear | IP65 / IP20 |
| Ambient | operation temp. | 0...+50°C |
| | shelf temperature | -20...+70°C |
| | humidity | 0...95% no condensate |
| Input type | standard | pnp-initiator |
| Inputs | count E1, E2 | 0...8,5kHz, level L=0...2,5V, H=4,5...24V |
| Input | HOLD/RESET E3 | level L=0...2,5V, H=4,5...24V |
| Display | 7-segment | -19999...+19999, 13mm high |
| Switching outputs | 2 alarms | 250V/3A AC changeover contacts switching function |
| Sensor supply | short-circuit proof | about 20V 50mA max. |
| Supply voltage | AC | 230V AC, 50Hz, 7VA, 115V AC, 24V AC |
| | DC | 24V DC ±10% 0,3A max. |

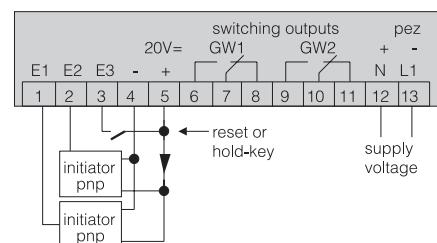

Options

| | | |
|-------------------|-------------------|--|
| Input type | for npn-initiator | e.g. npn-rotation encoder |
| | Namur-initiator | with suitable sensor supply +10V DC |
| | contact | no bounce up to <100Hz |
| Analog output -sa | current 0/4-20mA | 12bit resolution, 500Ω burden max. freely adjustable, accuracy 0,15% typ. |

Menu (Display Mode Functions)

Holding gray background keys pressed produces the following key function in the display mode:

| | |
|---------|---|
| + | read relay output 1 |
| | read relay output 2 |
| | hold display |
| | reset to start value after 3s (if active) |
| | read MIN |
| | read MAX |
| + | clear MIN |
| + | clear MAX |
| + 2x | edit mode relay output 1 |
| + 2x | edit mode relay output 2 |
| + + 2x | edit mode basic settings |

Key Functions in Edit Mode

- scrolls FWD to next setting
- scrolls RTN to previous setting
- selects digit (flashing) to be changed
- counts flashing digit UP
- carry settings, END edit mode

When no entry is made within two minutes, display returns to the display mode.

Relay Output Edit Mode

key combination + 2x (relay output 1)

| scroll | display | setting | range |
|--------|---------|--------------------|-----------------|
| | S1. S | switchpoint | -19999...+19999 |
| | S1. H | hysteresis | 1...19999 Digit |
| | S1.An | delayed ON (in s) | 0...999,9s |
| | S1.Ab | delayed OFF (in s) | 0...999,9s |

Key combination + 2x analogous to this for relay output 2.

Alarm Displays

| | |
|-------|-----------------------------|
| F.unt | range LO violated |
| F. üb | range HI violated |
| F.Err | input frequency HI violated |

Examples for setting signal input

1. Press key combination + + 2x to change to edit mode.
2. Choose by keys or the appropriate display points.
3. With or set the parameters you need (see examples).
4. Carry settings with .

Example 1 Event counter (Sum or difference counter)

Connection see diagram 1.

Setting return counter 100...0, step 1.

| display | setting | meaning |
|---------|---------|---|
| SE. b | 0 | E1+E2, pulses to E1 or E2 are treated equal ("1=difference E1-E2) |
| InnP | 1 | number of pulses |
| A. dP | 11111 | none decimal point |
| AnZU | -1 | -1 step per 1 pulse (return counter) |
| St.E3 | 1 | E3 active for reset-input |
| PrES | 100 | start value 100 |

Example 2 Distance meter with rotation encoder

Connection see diagram 2.

Setting to input 300 pulses=display 200,0mm.

| display | setting | meaning |
|---------|---------|--------------------------------------|
| SE. b | 2 | input rotation encoder |
| InnP | 300 | number pulses |
| A. dP | 1111.1 | decimal point last place |
| AnZU | 200,0 | display range per 300 pulses |
| St.E3 | 1 | E3 active for reset input |
| | | for example to automatic cycle reset |
| St. P | 1 | 3s key = cycle reset |
| PrES | 0,0 | start value 0,0 |

Basic Settings in Edit Mode

Key combination + + 2x

| display | setting | range |
|---------|--|---|
| SE. b | signal input | 1=counter difference E1-E2 3=frequ. 1000...11000Hz 5=frequency 0...1000Hz 7=puls width 1...19999 none, 1-2-3rd place -19999...+19999 01...20 values, averaged -19999...+19999 (opt. sa) -19999...+19999 (opt. sa) 0...22,00mA (option sa) 0...22,00mA (option sa) 0=LO active 1=HI active 0=without function 1=reset-input 2=hold-input 0=not possible 1=possible after about 3s -19999...19999 0=independent outputs 1>window function 2=three-term controller 0=Min,1=Max 2=Min inverted 3=Max inverted 0=switching 1=wiping 0=Min,1=Max 2=Min inverted 3=Max inverted 0=switching 1=wiping |
| InnP | 0=counter sum E1+E2 2=distance w. rot.encoder 4=range 3 x factor 60 6=timer start-stop number pulses display decimal point display range / pulse display buffer, average A. An A. En SA.An SA.En St.PF | 1...19999 none, 1-2-3rd place -19999...+19999 01...20 values, averaged -19999...+19999 (opt. sa) -19999...+19999 (opt. sa) 0...22,00mA (option sa) 0...22,00mA (option sa) 0=LO active 1=HI active 0=without function 1=reset-input 2=hold-input 0=not possible 1=possible after about 3s -19999...19999 0=independent outputs 1>window function 2=three-term controller 0=Min,1=Max 2=Min inverted 3=Max inverted 0=switching 1=wiping 0=Min,1=Max 2=Min inverted 3=Max inverted 0=switching 1=wiping |
| St.E3 | control input E3 | control input E3 |

| S2.SF | relay output 2 function | 0=Min,1=Max 2=Min inverted 3=Max inverted |
| S2.tF | relay output 2 time function | 0=switching 1=wiping |

Example 3 Frequency counter with initiator

Connection see diagram 1 or diagram 3.

Setting to 0...5kHz=0...100,0% with analog output 4-20mA.

| display | setting | meaning |
|---------|---------|---------------------------|
| SE. b | 3 | frequency input |
| InnP | 5000 | number of pulses |
| A. dP | 1111.1 | decimal point last place |
| AnZU | 100,0 | display range 5000 pulses |
| A. An | 0,0 | display LO 0,0 |
| A. En | 100,0 | display HI 100,0% |
| SA.An | 4,00 | analog output LO 4,00mA |
| SA.En | 20,00 | analog output HI 20,00mA |

Example 4 Revolution counter with initiator

Connection see diagram 1 or diagram 3.

Setting input 0...600 pulses/min=display 0...100,0 r.p.m.

| display | setting | meaning |
|---------|---------|---|
| SE. b | 5 | input frequ. 0...1000Hz (=0...60000 r.p.m.) |
| InnP | 10 | number of pulses per second (600 pulses / min = 10/s) |
| A. dP | 1111.1 | decimal point last place |
| AnZU | 100,0 | display range per 10 pulses/s (=600/min) |
