

Tension Load Cells

Delivers a high-accuracy weighing system for suspended in-process vessels

.....

TECHNICAL SPECIFICATIONS

Standard Tension Cell

Tension Load Cells deliver a high-accuracy weighing system for suspended in-process vessels. The TC1 and high capacity TC2 are designed for industrial scale measurement of inventory and process applications.

Construction is alloy steel with nickel plate for high accuracy and corrosion resistance and is fully sealed to IP67 rating, making it ideal for outdoor as well as indoor applications.

Both standard and high capacity tension cells have full bridge electrical circuits and can be connected to any of the Kistler-Morse controller models to provide an output value.

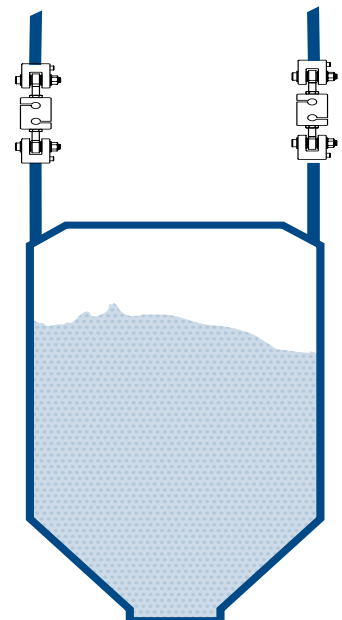

Capacity ratings should correspond with total weight of the vessel including material. Capacity of tension cells are sumable (ie. four tension cells rated at 220 lbs (100 kg) can support a 800 lb (362 kg) vessel). Tension cells cannot be linked directly together for greater capacity.

High Capacity Tension Cell

APPLICATIONS

- **Limited floor space** to add another tank
- Tank is required to be in a **specific location** above another to drop in at a particular temperature, color or other additive
- **Vertical process**
- Complex **plant configuration** where piping and conduit may be blocking areas
